

The advanced method of checking the health of your eyes

Your eye is a window to your health

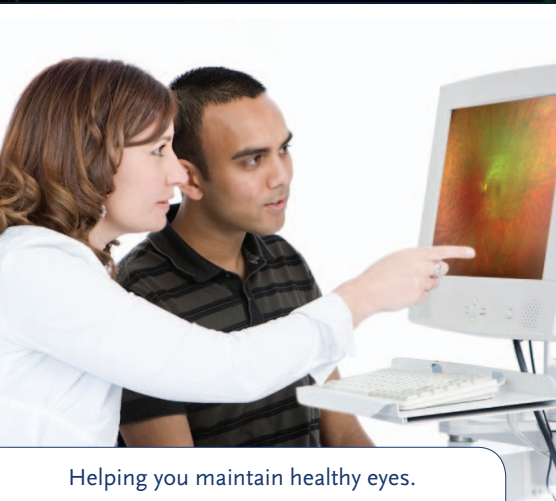

- Early signs of many diseases – retinal and others – can show on your retina long before you notice any symptoms.
- The earlier these signs are detected the higher the chance of successful treatment.

We are committed to the highest standard of eye care and as such we invest in the latest technology so that we can offer you the most advanced eye exam available.

Today we would like to give you the opportunity to have an optomap Retinal Image which:

- captures more than 80% of your retina in one image (traditional methods typically reveal only 10-15% of your retina at one time)
- helps us detect early signs of diseases more efficiently and effectively than with traditional methods
- lets you see your own retinal image in a unique 3D wrap sequence

We recommend that all patients have a regular optomap Retinal Image.

Helping you maintain healthy eyes.
